PBB after refurbishment

For sale:

Refurbished Passenger Boarding Bridge

Anton Air Support is the global partner for new and refurbished passenger boarding bridges. We deliver tailor-made solutions.

INTRODUCING OUR PASSENGER BOARDING BRIDGE

Anton Air Support fully refurbished this 27-year-old passenger boarding bridge (PBB) into a smooth and safe operational bridge, that meets the requirements of today during the embarking and disembarking of the passengers.

Our technical specialists dismantled the complete 3-steel tunnel PBB, electrical and mechanical. We inspected the PBB before the dismantling and listed the materials that could be reused or must be renewed. We can also install several options, if requested by the client, like programming automatic docking, repainting the bridge in the colors requested by the client, mounting a GPU unit or a PCA unit brackets under the PBB, air conditioning in the bridge, and more.

Anton Air Support extended the life span of this refurbished PBB by 15 years!. We invested in sustainability (by reusing materials and new durable materials) and reducing the CO2 emissions, to contribute to our CO2 footprint goals for a greener environment and planet.

This full refurbishment resulted in a 41% lower investment compared to buying a new passenger boarding bridge.

FOR SALE: This Anton Air Bridge (A3-60 19,3/36,3 meter 400V 3~ 50Hz), is equipped with the following:

- Fully sandblasted and painted in RAL 9010
